

Zettaweb

Email:support@zetta-web.in

Vridhi User App:

Detailed Functional & System Documentation — Phase 2

Document Scope

This document covers the application flow **after the user has submitted the basic registration details**:

Completed: Admin shares App Link/QR → User scans QR → User fills Name, Address, Phone, District, State, PAN & Aadhaar details.

The documentation below starts from:

Payment → Payment Verification → Admin Approval → Terms & Conditions → Video Access → Watch-Time Tracking → Refund → Earning Opportunity → Admin Video Management

1. Overall Application Flow

The complete remaining flow will work as follows:

```
User Registration
↓
Razorpay Payment
↓
Payment Verification
↓
Payment Successful
↓
"Waiting for Admin Approval"
↓
Admin Reviews User
↓
Admin Approves User
↓
User Gets Access
↓
User Dashboard
↓
Product Access
↓
Select Video Language
↓
Terms & Conditions
↓
Accept Terms
```

Zettaweb

Email:support@zetta-web.in

↓
Confirm
↓
Video Section Opens
↓
Watch Video
↓
Backend Tracks Watch Time
↓
Overall Watch Percentage Calculated
↓
Refund Eligibility Checked
↓
User Can Request Refund
↓
If Watch Time $\geq$ 25%
Refund Option Disabled

2. Payment Gateway — Razorpay

The application will use **Razorpay** as the payment gateway.

Razorpay

The payment system should be integrated between the registration process and admin approval.

2.1 Payment Flow

After the user completes the required registration information, the user will be shown the payment section.

The screen should contain:

- Product/service name
- Amount payable
- Payment description
- Razorpay payment button / checkout
- Payment status

Example:

COMPLETE PAYMENT

Product:
Training / Video Access Package

Zettaweb

Email:support@zetta-web.in

Amount :

₹XXXX

[Pay Securely with Razorpay]

3. Razorpay Payment Process

When the user clicks **Pay**, the application will open Razorpay Checkout.

The user can complete payment using the payment methods supported by Razorpay, such as:

- UPI
- Credit Card
- Debit Card
- Net Banking
- Other methods supported by the configured Razorpay account

The application should **not consider a payment successful merely because the frontend receives a success response.**

Payment status should be verified through the backend.

4. Payment Verification

After payment completion:

```
Razorpay
↓
Payment Response
↓
Backend Verification
↓
Payment Valid?
↓
YES
↓
Store Payment Details
↓
User Status = PAYMENT_COMPLETED
↓
Waiting for Admin Approval
```

Zettaweb

Email:support@zetta-web.in

The backend should store relevant payment information.

Suggested Payment Data

payment_id
order_id
user_id
amount
currency
payment_status
payment_method
payment_timestamp
razorpay_signature

Sensitive payment information should **not** be unnecessarily stored.

5. Payment Statuses

The system should support different payment states.

Status	Meaning
PENDING	Payment has not been completed
SUCCESS	Payment successfully verified
FAILED	Payment failed
CANCELLED	User cancelled checkout
REFUNDED	Payment has been refunded
PARTIALLY_REFUNDED	Partial refund if supported by business rules

The user's access should only proceed when payment has been successfully verified.

6. After Successful Payment

After successful payment verification, the user should **not immediately receive the video/product access**.

Instead, the user will see:

Payment Successful

Payment Successful ✓

Your payment has been received successfully.

Your account is currently waiting for approval from the administrator.

Zettaweb

Email:support@zetta-web.in

You will receive access after admin approval.

Status:

□ Waiting for Approval

The user can then enter the application dashboard, but restricted functionality should remain locked.

7. Admin Approval System

After successful payment, the user will appear in the **Admin Dashboard → Pending Approvals** section.

The admin should be able to see:

- User name
 - Phone number
 - Address
 - District
 - State
 - PAN details/status
 - Aadhaar details/status
 - Payment status
 - Payment amount
 - Payment ID
 - Registration date
 - Approval status
-

8. Admin User Approval

The admin will have two primary actions:

Approve

[APPROVE USER]

Zettaweb

Email:support@zetta-web.in

Reject

[REJECT USER]

If additional review is required, the admin can keep the account pending.

Suggested statuses:

PENDING_APPROVAL

APPROVED

REJECTED

SUSPENDED

9. Approval Notification

Once the admin approves the user, the user's account status changes to:

APPROVED

The user should receive a notification/message indicating that access has been approved.

Example:

Your account has been approved. You can now access your purchased product from your dashboard.

The exact notification channel can later be implemented through:

- In-app notification
- SMS
- WhatsApp
- Email
- Push notification

10. User Dashboard

After approval, the user will receive access to the main dashboard.

The dashboard can contain:

USER DASHBOARD

Zettaweb

Email:support@zetta-web.in

Welcome, [User Name]

[Product Access]

[Video Section]

[My Progress]

[Refund]

[Earning Opportunity]

[Settings]

The dashboard should only expose purchased/assigned content.

11. Product Access

The user will have a dedicated **Product Access** section.

This section will contain the product/service that was assigned to the user.

Example:

MY PRODUCT

Training Program
Video Course

Status:
✓ Active

[Access Product]

The product should not become accessible before:

1. Payment is successful.
 2. Admin approval is completed.
-

12. Video Language Selection

When the user opens the product, the system will ask the user to select the preferred video language.

Example:

Zettaweb

Email:support@zetta-web.in

Choose Your Video Language

Please select the language in which you want to watch the training.

- ☐ English
- ☐ Hindi
- ☐ Bengali
- ☐ Other

[Continue]

The available languages should be controlled by the product/video configuration.

13. Language Selection

Suppose the user selects:

English

The application stores the user's selected language.

Example backend value:

preferred_language: "English"

The application will then load the relevant English video content.

14. Terms & Conditions

Before the user gets access to the videos, the application must display the relevant **Terms & Conditions**.

The user should not be able to access the videos without accepting them.

Example:

Terms & Conditions

[Terms and Conditions Content]

☐ I have read and agree to the Terms & Conditions.

[Confirm]

Zettaweb

Email:support@zetta-web.in

15. Terms Acceptance

The checkbox must be mandatory.

If the user clicks **Confirm** without checking the box:

Please accept the Terms & Conditions to continue.

If the checkbox is selected:

☒ I agree to the Terms & Conditions.

[Confirm]

The system then records the user's acceptance.

16. Terms Acceptance Data

The backend should maintain a record such as:

```
terms_accepted = true
terms_version = "1.0"
terms_accepted_at = timestamp
```

This is important because the application should know **which version of the terms the user accepted and when**.

17. Video Access

After the user:

- Has paid
- Has been approved
- Has selected a language
- Has accepted the Terms & Conditions

the video section becomes available.

The user will be redirected/opened into a separate:

Zettaweb

Email:support@zetta-web.in

Video Section

This section will be part of the user's dashboard.

18. Video Section Structure

Example:

VIDEO TRAINING

Course Progress

42%

Total Videos: 10

Completed: 4

01. Introduction

Duration: 10:25

✓ Watched

02. Business Basics

Duration: 15:40

▶ Continue Watching

03. Marketing

Duration: 12:20

🔒 Locked / Available

The exact UI can be finalized during design.

19. Video Storage — Cloudinary

The videos will be stored using **Cloudinary**.

Cloudinary

The admin will upload videos from the **Admin Dashboard**.

The application should not store large video files directly inside the application server.

Instead:

Zettaweb

Email:support@zetta-web.in

Admin Dashboard
↓
Upload Video
↓
Backend
↓
Cloudinary
↓
Cloudinary Video URL / Asset
↓
Database stores video metadata
↓
User watches video

20. Admin Video Upload

The admin dashboard should contain a dedicated:

Video Management

section.

The admin should be able to upload:

- Video title
- Video description
- Video language
- Product/course
- Video order/sequence
- Video file
- Thumbnail
- Duration
- Other relevant metadata

Example:

ADD NEW VIDEO

Video Title:
[_____]

Language:
[English ▼]

Zettaweb

Email:support@zetta-web.in

Product:

[Training Package ▼]

Video Order:

[01]

Video File:

[Choose File]

Thumbnail:

[Choose Image]

[UPLOAD VIDEO]

21. Video Processing

After upload:

Admin

Upload Video

Backend

Cloudinary

Video Processing

Cloudinary Asset URL

Database

The database should store the Cloudinary asset identifier and relevant metadata rather than duplicating the video itself.

22. Video Assignment

A critical rule of the application is:

Once a video has been assigned/made available to a user who has paid for the service, the admin must not be able to delete that assigned video.

This is especially important because the user has paid for access to the service/content.

Zettaweb

Email:support@zetta-web.in

23. Video Deletion Restriction

Suppose:

User A

Paid

Approved

Video Package Assigned

The admin should no longer have a normal **Delete Video** option for that assigned content.

Instead, the admin dashboard should display:

Video Status:

✓ Assigned to User

Deletion:

▣ Not Allowed

24. Important Legal/Business Protection

The system should treat assigned paid content as protected content.

Once assigned to a user:

DELETE = DISABLED

The backend must enforce this restriction as well.

It should not only be disabled in the frontend.

For example, even if someone manually sends a delete API request, the backend should reject it.

DELETE /video/{id}

→ Check whether video is assigned

→ If assigned:

 Reject deletion

→ Otherwise:

 Allow according to admin policy

This prevents deletion simply by bypassing the dashboard UI.

The business should have its legal counsel review the exact wording around "illegal offence" and the user's contractual/content-access rights. The software requirement itself should be implemented as a **non-deletion rule for assigned paid content**.

Zettaweb

Email:support@zetta-web.in

25. Video Watch-Time Tracking

One of the most important features is the watch-time tracking system.

The requirement is:

The system will calculate the amount of actual video time watched by the user.

The system will **not simply calculate progress based on the number of videos completed.**

26. Example of Watch-Time Calculation

Suppose the user has:

10 videos

and the combined duration of all videos is:

100 minutes

The user watches:

25 minutes

Then:

Watch Percentage

=

$\text{Watched Time} / \text{Total Available Time} \times 100$

Therefore:

$25 / 100 \times 100$

= 25%

So the user's overall watch percentage is:

25%

Zettaweb

Email:support@zetta-web.in

27. Important: Track Time, Not Just Video Completion

The backend should track the actual amount of video time watched.

Example:

A video is:

20 minutes

The user watches:

8 minutes

Then approximately:

$$8 / 20 \times 100$$
$$= 40\%$$

for that video.

The overall course percentage should be based on accumulated eligible watch time across the assigned videos.

28. Watch-Time Data

A watch-progress record could contain:

```
user_id
video_id
video_duration
watched_seconds
last_position_seconds
completion_percentage
last_watched_at
```

Example:

```
user_id: 1024
video_id: 55
video_duration: 1200
watched_seconds: 480
last_position_seconds: 480
completion_percentage: 40%
```

Zettaweb

Email:support@zetta-web.in

29. Overall Watch Percentage

The backend should calculate:

$$\frac{\text{Total Watched Seconds}}{\text{Total Assigned Video Seconds}} \times 100$$

For example:

Total video duration = 6000 seconds

User watched = 1500 seconds

$$1500 / 6000 \times 100$$

= 25%

Therefore:

overall_watch_percentage = 25%

30. Watch Tracking Architecture

The video player will periodically communicate the user's playback position to the backend.

Example:

```
Video Player
  ↓
Playback Position
  ↓
Frontend Tracking
  ↓
Backend Progress API
  ↓
Database
```

The application can periodically send progress updates rather than making a backend request every second.

For example, progress can be synchronized periodically and on important events such as:

- Play
- Pause
- Seek
- Video ended

Zettaweb

Email:support@zetta-web.in

- Page/app closed
 - User leaves video
-

31. Preventing False Watch-Time

The system should distinguish between:

Actual playback

and

Simply opening the video.

Opening a video should **not automatically count as watched time.**

For example:

User opens 20-minute video

↓

Watches 5 minutes

↓

Closes video

The system should record approximately:

5 minutes watched

not:

20 minutes watched

32. Handling Video Seeking

A user may attempt to move the video from:

00:00

directly to:

19:00

The application should not automatically count the skipped 19 minutes as watched.

The watch-time logic should distinguish between:

Actual played duration

Zettaweb

Email:support@zetta-web.in

and

Seeked position

This is especially important because the 25% threshold determines refund eligibility.

33. Overall Progress Dashboard

The user should be able to see their progress.

Example:

YOUR TRAINING PROGRESS

Total Content:
100 Minutes

Watched:
18 Minutes

Remaining:
82 Minutes

Overall Progress:
18%

Progress can also be represented visually:

34. Refund System

The application will contain a **Refund** option inside:

Settings

Example:

Settings

Account
Language
Terms & Conditions
Refund Request
Help & Support
Logout

The user can select:

Zettaweb

Email:support@zetta-web.in

Refund Request

35. Refund Eligibility Rule

The primary business rule is:

A refund is available only until the user reaches 25% of the total eligible watch time.

Once the user reaches or exceeds 25%:

Refund = NOT ELIGIBLE

Therefore:

36. Example — Refund Eligible

Total video content:

100 minutes

User watched:

20 minutes

Percentage:

20%

Since:

$20\% < 25\%$

the user can request a refund.

37. Example — Refund Not Eligible

Total video content:

Zettaweb

Email:support@zetta-web.in

100 minutes

User watched:

25 minutes

Percentage:

25%

The threshold has been reached.

Therefore:

Refund → Not Available

38. Refund Request Screen

When the user is eligible, they can open:

Settings

Refund Request

The system should display:

Refund Request

Current Watch Progress:

12%

Refund Eligibility:

✓ Eligible

Reason for Refund:

[_____]

Additional Details:

[_____]

[SUBMIT REFUND REQUEST]

39. Refund Information Required

The user should provide relevant details so that the admin can review the request.

Suggested information:

Zettaweb

Email:support@zetta-web.in

- User name
- Registered phone number
- User ID
- Payment ID
- Product/package
- Refund reason
- Additional description
- Request date
- Current watch percentage

The system should automatically capture information that already exists rather than forcing the user to enter it again.

40. Refund Request Status

The refund request can have statuses:

PENDING
UNDER_REVIEW
APPROVED
REJECTED
PROCESSED
CANCELLED

Example:

Refund Status:

☐ Under Review

41. Admin Refund Management

The admin dashboard should contain:

Refund Requests

The admin can view:

User
Payment ID

Zettaweb

Email:support@zetta-web.in

Amount
Watch %
Reason
Request Date
Status

Example:

User	Amount	Watch %	Status
User A	₹5,000	8%	Pending
User B	₹5,000	19%	Under Review
User C	₹5,000	27%	Not Eligible

42. Backend Refund Validation

Refund eligibility **must be checked by the backend**.

The frontend may show:

Refund Available

but the backend must independently verify:

`current_watch_percentage < 25%`

before creating/processing a refund request.

This prevents users from manipulating frontend values.

43. Refund Threshold Should Be Locked

The 25% threshold should ideally be maintained as a configurable business rule.

Example:

`REFUND_WATCH_THRESHOLD = 25`

However, changing this value should be controlled by authorized administrators and should not retroactively invalidate existing contractual terms without appropriate business/legal handling.

44. Earning Opportunity Section

The dashboard will also contain:

Zettaweb

Email:support@zetta-web.in

Your Earning Opportunity

This section explains how users can potentially earn through the platform/program.

Example dashboard item:

YOUR EARNING OPPORTUNITY

Learn → Apply → Refer/Participate → Earn

[Explore Opportunity]

The exact earning mechanism will depend on the client's business model.

45. Earning Opportunity Page

The page may contain:

Introduction

YOUR EARNING OPPORTUNITY

Discover how you can use the knowledge and resources provided through this program to create an earning opportunity.

Then sections such as:

- How it works
- Eligibility
- Steps
- Benefits
- Rules
- FAQs
- Contact/support

46. Admin Dashboard

The application will have a dedicated Admin Dashboard.

The main sections can be:

Zettaweb

Email:support@zetta-web.in

ADMIN DASHBOARD

- Overview
- Users
- Pending Approvals
- Approved Users
- Payments
- Products
- Videos
- Assigned Videos
- Watch Progress
- Refund Requests
- Earning Opportunity
- Terms & Conditions
- Notifications
- Settings

47. Admin User Management

The admin should be able to view user information and status.

Example:

USER MANAGEMENT

Name
Phone
District
State
Payment Status
Approval Status
Watch Progress
Refund Eligibility
Registration Date

48. Admin Watch-Time Monitoring

The admin should be able to see how much content each user has watched.

Example:

User:
Rahul Kumar

Total Content:
100 Minutes

Watched:
37 Minutes

Zettaweb

Email:support@zetta-web.in

Progress:
37%

Refund:
Not Eligible

This allows the admin to understand the user's engagement and refund eligibility.

49. Admin Video Management

The admin dashboard should allow:

Allowed

- Upload new videos
- Add video metadata
- Assign videos/products
- Set video order
- Add thumbnails
- Manage language versions
- View video details
- View assignment status
- View watch statistics

Restricted

- Delete an assigned paid video
-

50. Video Assignment States

A video can have states such as:

DRAFT
UPLOADED
AVAILABLE
ASSIGNED
IN_USE
ARCHIVED

Zettaweb

Email:support@zetta-web.in

Once the video becomes assigned to a paid user:

ASSIGNED

the deletion operation should be locked.

51. Multi-Language Video Management

Because users can select their preferred language, videos should be associated with a language.

Example:

Product:
Business Training

Videos:

01 - Introduction
English
Hindi
Bengali

02 - Marketing
English
Hindi
Bengali

The system should show the correct language version after the user makes their selection.

52. User Access Control

The backend should verify every protected request.

For example:

Can user access video?

↓

Is user authenticated?

↓

Is payment successful?

↓

Is admin approval completed?

↓

Has T&C been accepted?

↓

Does user have access to this product?

↓

YES → Allow video access

Zettaweb

Email:support@zetta-web.in

This validation should happen server-side.

53. Important Security Rule

The Cloudinary URL should not be treated as the user's authorization.

A user should not be able to simply obtain a video URL and access content they aren't entitled to.

The application should use appropriate Cloudinary delivery/access controls where needed and ensure that authorization is performed by the application's backend.

54. Complete User State Machine

The user's account can follow this lifecycle:

```
REGISTERED
↓
PAYMENT_PENDING
↓
PAYMENT_SUCCESS
↓
WAITING_FOR_APPROVAL
↓
APPROVED
↓
TERMS_PENDING
↓
TERMS_ACCEPTED
↓
PRODUCT_ACTIVE
↓
VIDEO_ACCESS
↓
WATCHING
↓
PROGRESS_TRACKED
```

Possible alternative paths:

```
PAYMENT_FAILED
PAYMENT_CANCELLED
REJECTED
SUSPENDED
REFUND_REQUESTED
REFUNDED
```

Zettaweb

Email:support@zetta-web.in

55. Recommended Database Structure

A simplified backend database can contain the following entities.

Users

id
name
address
phone
district
state
pan_number
aadhaar_number
status
preferred_language
created_at
updated_at

Payments

id
user_id
razorpay_order_id
razorpay_payment_id
amount
currency
status
created_at

Products

id
name
description
status
created_at

Videos

id
product_id
title
description
language
cloudinary_public_id
cloudinary_url
duration_seconds
thumbnail_url
sequence
status
created_at

Zettaweb

Email:support@zetta-web.in

User Product Access

id
user_id
product_id
assigned_at
status

User Video Progress

id
user_id
video_id
watched_seconds
last_position_seconds
completion_percentage
last_watched_at

Terms Acceptance

id
user_id
terms_version
accepted
accepted_at

Refund Requests

id
user_id
payment_id
reason
additional_details
watch_percentage
status
created_at
updated_at

56. Notification System

The system should notify the user about important events.

Examples:

Payment

Payment successful.

Zettaweb

Email:support@zetta-web.in

Approval

Your account has been approved.

Rejection

Your account could not be approved at this time.

Refund

Your refund request has been received.

Refund Decision

Your refund request has been approved/rejected.

The notification mechanism can be finalized separately.

57. Dashboard Access Rules

User State	Dashboard	Product	Video	Refund
Registered	Limited	✗	✗	✗
Payment Pending	Limited	✗	✗	✗
Payment Successful	Limited	✗	✗	✗
Waiting Approval	Limited	✗	✗	✗
Approved	✓	✓	T&C required	✓ if eligible
T&C Accepted	✓	✓	✓	✓ if eligible
Watch ≥25%	✓	✓	✓	✗

58. End-to-End User Journey

The complete experience from the point where the current documentation ends will be:

USER COMPLETES REGISTRATION
↓
PAYMENT PAGE
↓
RAZORPAY CHECKOUT
↓
PAYMENT VERIFIED
↓
PAYMENT SUCCESS
↓

Zettaweb

Email:support@zetta-web.in

WAITING FOR ADMIN APPROVAL
↓
ADMIN REVIEWS USER
↓
ADMIN APPROVES
↓
USER RECEIVES ACCESS
↓
USER OPENS DASHBOARD
↓
PRODUCT ACCESS
↓

↓
USER GETS ACCESS
↓
ADMIN MONITORS VIDEO PROGRESS
↓
USER WATCH-TIME DATA UPDATES
↓
REFUND REQUEST MAY ARRIVE
↓
ADMIN REVIEWS REQUEST
↓
ADMIN APPROVES / REJECTS

60. Critical Business Rules

The development team should treat these as **mandatory business rules**.

Rule 1 — Payment

A user must have a successfully verified Razorpay payment before receiving product access.

Rule 2 — Approval

Payment success alone does not activate the account.

Admin approval is required.

Rule 3 — Terms

The user must accept the Terms & Conditions before accessing the videos.

Rule 4 — Language

The user selects the language before entering the video learning section.

Rule 5 — Video Storage

Videos are stored through Cloudinary.

Rule 6 — Watch Time

Progress is calculated based on **actual watched video seconds**, not merely the number of videos opened.

Rule 7 — Refund

Refund eligibility exists while the user's overall watch percentage is **below 25%**.

Zettaweb

Email:support@zetta-web.in

Rule 8 — 25% Threshold

Once the user's calculated watch percentage reaches **25% or more**, the refund option becomes unavailable according to the stated business rule.

Rule 9 — Backend Validation

Payment, access, watch progress, and refund eligibility must all be validated server-side.

Rule 10 — Assigned Video Protection

Once paid content/video has been assigned to a user, the admin cannot delete that assigned content through the system.

Rule 11 — Video Deletion Enforcement

The deletion restriction must exist in the backend, not only in the Admin Dashboard UI.

Rule 12 — Cloudinary

Cloudinary is used as the video/media storage and delivery layer.

61. Recommended Final Architecture

Zettaweb

Email:support@zetta-web.in

62. Final Functional Modules

The application after the existing registration module will therefore consist of:

User Side

1. Razorpay Payment
2. Payment Status
3. Waiting for Approval
4. Admin Approval Status
5. User Dashboard
6. Product Access
7. Language Selection
8. Terms & Conditions
9. Terms Acceptance
- 10.Video Section
- 11.Video Player
- 12.Watch-Time Tracking
- 13.Progress Dashboard
- 14.Refund Request
- 15.Refund Eligibility
- 16.Earning Opportunity

Zettaweb

Email:support@zetta-web.in

17.Settings

18.Notifications

Admin Side

1. Admin Login
2. Dashboard
3. User Management
4. Pending Approval
5. User Approval/Rejection
6. Payment Monitoring
7. Product Management
8. Video Upload
9. Cloudinary Integration
- 10.Video Assignment
- 11.Language Management
- 12.Watch-Time Monitoring
- 13.Refund Management
- 14.Earning Opportunity Management
- 15.Terms & Conditions Management
- 16.User/Content Status Management

Most Important Development Note

The **25% refund rule and watch-time tracking** should be implemented very carefully.

The system should calculate something like:

TOTAL ASSIGNED VIDEO TIME

↓

6000 seconds

ACTUAL ELIGIBLE WATCH TIME

↓

1450 seconds

WATCH %

Zettaweb

Email:support@zetta-web.in

$$\begin{array}{c} \downarrow \\ 1450 / 6000 \times 100 \\ \downarrow \\ 24.16\% \end{array}$$

REFUND:

✓ ELIGIBLE

When the user reaches:

$$\begin{array}{l} 1500 / 6000 \times 100 \\ = 25\% \end{array}$$

the backend should mark:

refund_eligible = false

and the user's Settings page should reflect:

Refund Request

✗ Refund is no longer available because the minimum 25% watch-time threshold has been reached.

This should be **server-controlled**, so users cannot manipulate the frontend, browser storage, or video-player position to bypass the rule.

Summary of all the implemented features:

1. Payment & Transaction Management

- Razorpay payment gateway integration
- Payment verification
- Payment status tracking
- Payment/order history
- Failed/cancelled payment handling
- Payment confirmation

2. Admin Approval & User Access Control

- Admin approval/rejection system
- User approval status
- Access activation after approval
- User access restrictions based on payment/approval
- Account status management

Zettaweb

Email:support@zetta-web.in

3. User Dashboard

- Personalized user dashboard
- Product/course access
- User progress overview
- Account information
- Notifications/status information

4. Product & Video Management

- Product/course management
- Video upload from Admin Dashboard
- Cloudinary video storage integration
- Video metadata management
- Video categorization and sequencing
- Language-wise video management
- Video assignment to users

5. Multi-Language Video System

- Language selection before video access
- Language-specific video content
- Language-based video filtering/access

6. Terms & Conditions System

- Terms & Conditions display
- Mandatory acceptance checkbox
- Terms acceptance tracking
- Terms version/date recording
- Access restriction until acceptance

7. Video Player & Watch-Time Tracking
